

Journal Citation Reports (JCR) contains statistical information for approximately 8,400 science and technology journals and 3,000 social science journals.

Statistical information available for a journal title includes:

- **number of research articles published in a given year, “citable items”** (usually excluding editorials, news items, letters and meeting abstracts). Also, number of references attached to articles and the average number of citations per article.

This information is shown for review and non-review articles for each title.

- **number of times the journal title has appeared in the citations of the articles included in the ISI Citation Indexes, “Total Cites”** (not limited to research articles).

Multiple citations of the same article in a reference list count only once.

- **an indication of how quickly, during the year of publication, articles in a given journal are cited by others, “Immediacy Index”.**

It is the number of citations to articles published in a journal for a given year divided by the number of articles published in that year by that journal.

- **the average number of times articles published in the selected journal in the past two years have been cited in the selected year, “Impact Factor”.**

It is the number of citations received in the selected year divided by the total number of articles published in the two previous years

MATHEMATICS
Mathematics covers resources having a broad, general approach to the field. The category also includes resources focusing on specific fields of basic research in Mathematics such as topology, algebra, functional analysis, combinatorial theory, differential geometry and number theory.
