

Media Hopper Create

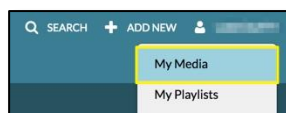

Downloading media for editing and viewing offline

Viewers can download video content created by another user, provided its owner has first enabled the download option for the specific file. Videos can be downloaded to a location chosen by the viewer.

Video owner – allowing downloads

Your video can only be downloaded by the viewer if you have first enabled downloads and selected the available formats.

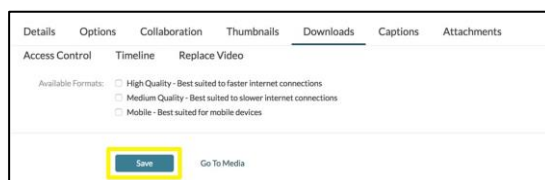

1. Click on your name and select **My Media** to display your media content.

2. Click on the **Edit** icon next to the video you wish to allow your viewers to download.

3. Click on the **Downloads** tab underneath your video file.
4. Select which download formats you want your viewer to be able to choose from when downloading your video. You can select more than one. Click **Save** to continue.

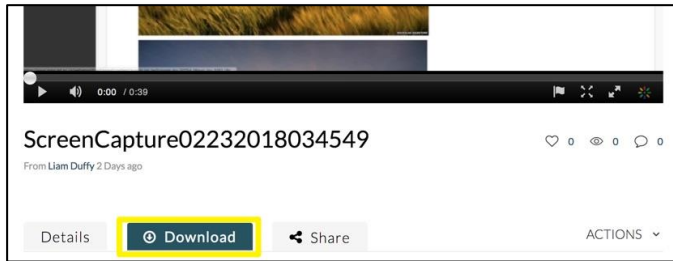

A green information box will appear to inform you that your changes have been saved.

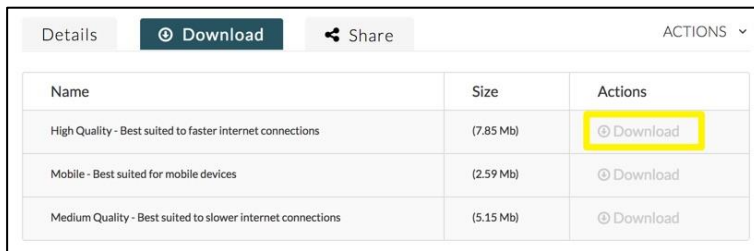

Viewer – downloading a video

Provided the content owner has enabled download of their video, you (the viewer) will see the download option below the video you are viewing.

1. With the video open on screen, click on the **Download** button.

2. The available formats for the download will appear on screen with some basic information about their quality and file size. Click **Download** next to the one you wish to download.

Depending on your browser settings, your download may save automatically to your Downloads folder, or you may be asked to select a location to save the file.

3. Locate and open the downloaded video to view it.
