

Media Hopper

Adding content from Media Hopper to the Moodle Media Gallery

The Media Hopper Gallery is a searchable gallery designed to allow teachers to manage all media content associated with a specific Moodle course. Content groups can be created and shared with or hidden from students view until required. Those enrolled on the course can also submit media content to the gallery.

Adding content to the gallery

The gallery has already been created for you but will need to be populated with some content from your Media Hopper account before users can see anything.

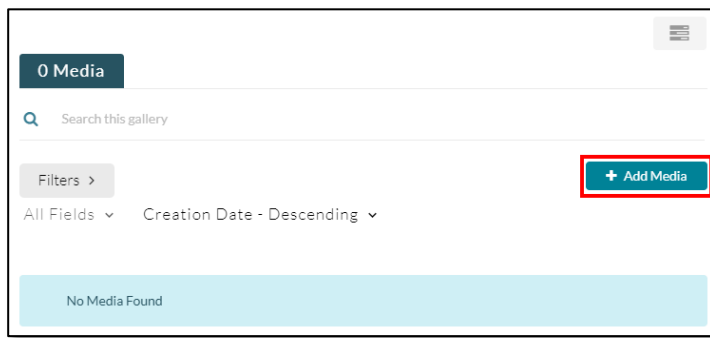

1. From the left-hand Navigation menu navigate to your course.

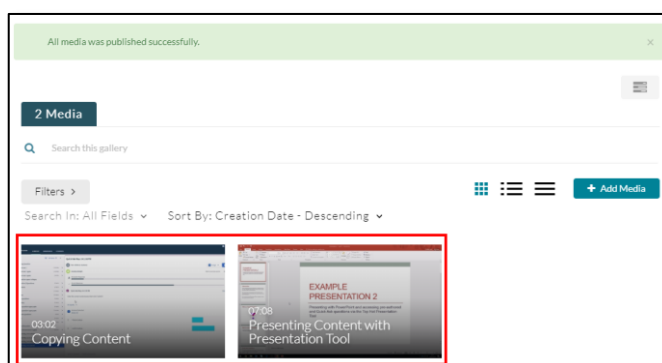

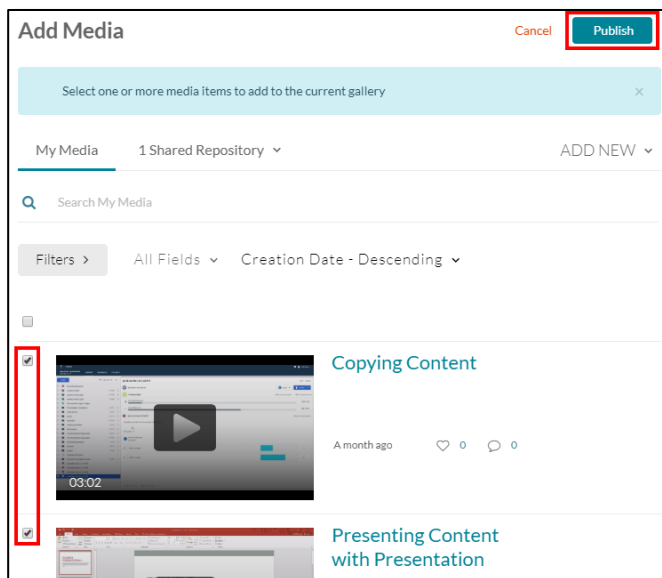

2. Once in the course a new menu will now be displaying with options for the course. From the left-hand menu, select **Media Hopper Create Gallery**.

3. When the **Media Gallery** window opens, click **Add Media**.

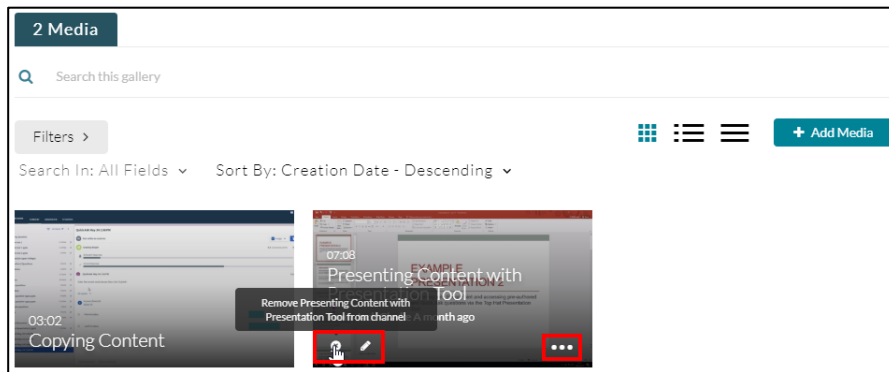

4. Tick the checkboxes next to the files you wish to add to the gallery and click **Publish**. You'll be notified that your files were published successfully.

Removing content from the Media Gallery

Content added to the gallery can be easily removed or edited.

1. Open the **Media Hopper Create Gallery** from the left-hand **Navigation** menu.
2. Hover over the media file you wish to remove, click on the **Options** button (the three dots) to display further options (Remove or Edit).

3. Click on the Remove button and when the **Remove Media** dialog appears, click **Remove**. Your file will no longer be part of this gallery.
